

## Save \$10K in overtime labor costs

### The problem

Using a spreadsheet for scheduling took 10–15 hours every week and tracking employee hours by hand resulted in thousands of dollars of overtime annually.

### The solution

Use When I Work to make scheduling faster, automate time tracking and manage labor costs.

Money saved in overtime **\$10K**

Time savings on scheduling and time tracking **10 times**

**David Porto**  
Co-owner

Prior to using When I Work, David was manually creating the schedule in a spreadsheet and emailing updates. This extremely time-consuming process took at least 10–15 hours a week, and tracking employees' hours by hand took an additional 3 hours.

After implementing When I Work, David has reduced his time spent scheduling and preparing timesheets for payroll from 15–20 hours to just 20 minutes every week. Plus, now he can better manage his labor costs, which saves him over \$10,000 annually in overtime. Along with time and cost savings, his employees love using the app and have become more accountable and empowered.
